

# Kiosk Mode Exploit Tutorial

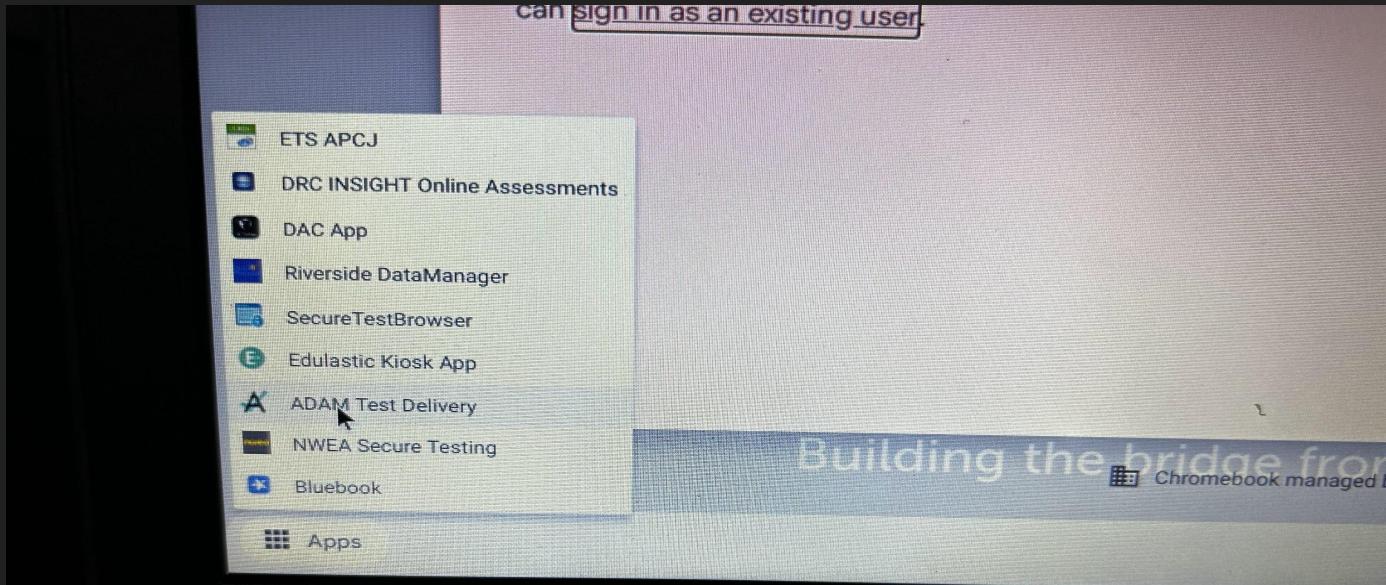

# Step 1: Turn off your wifi in the control center.

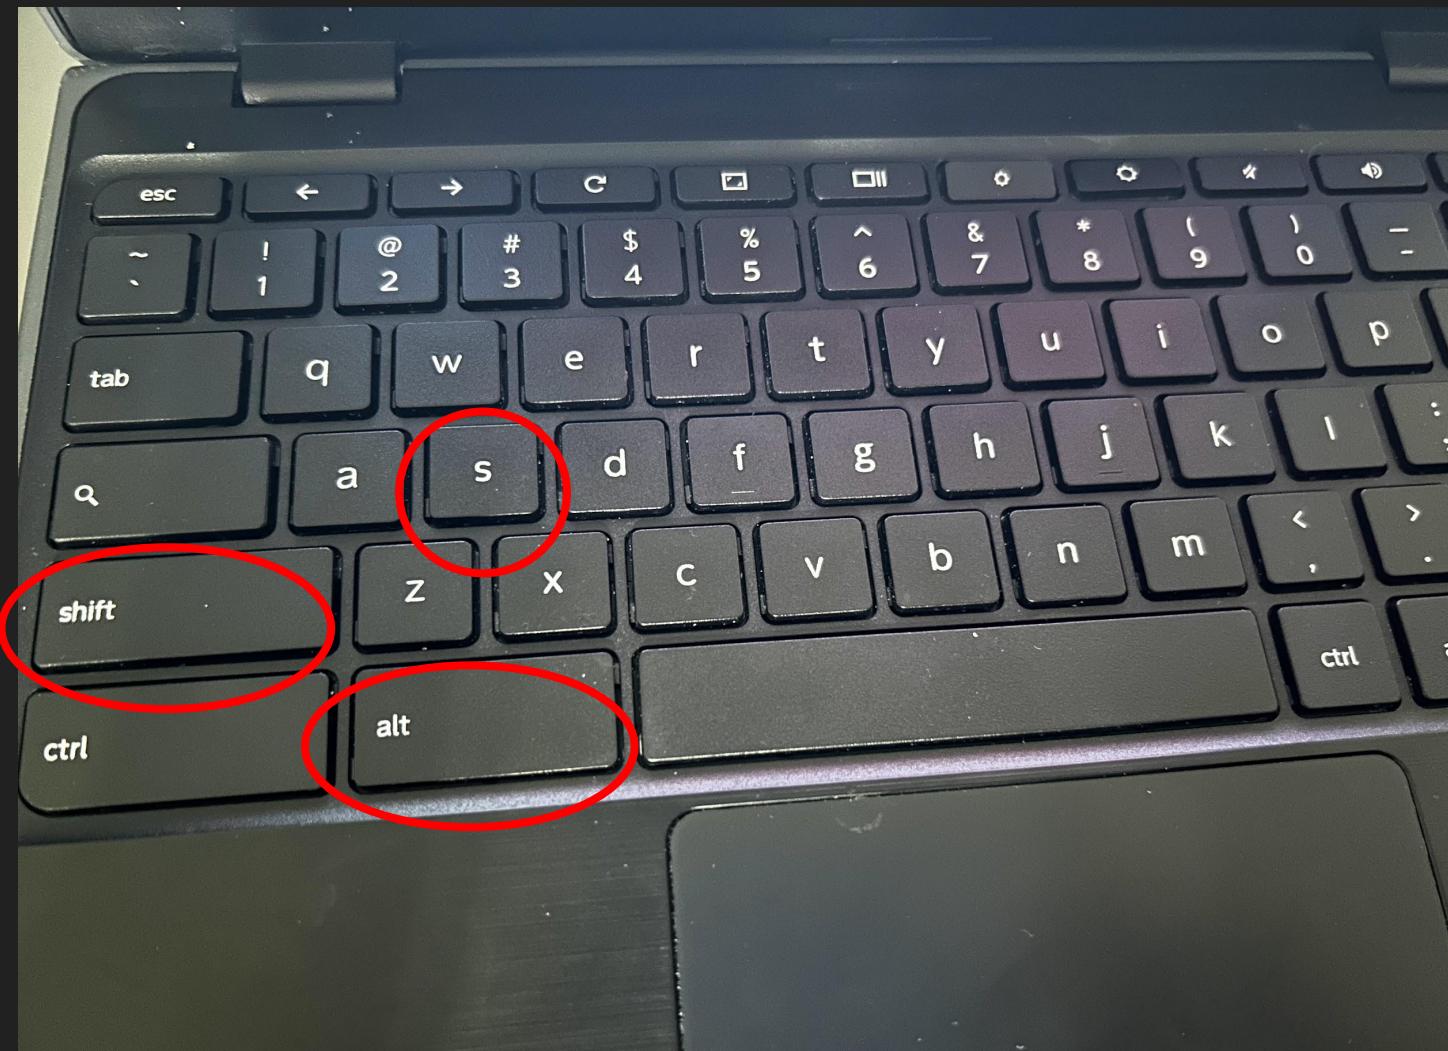

# It should look like this now.

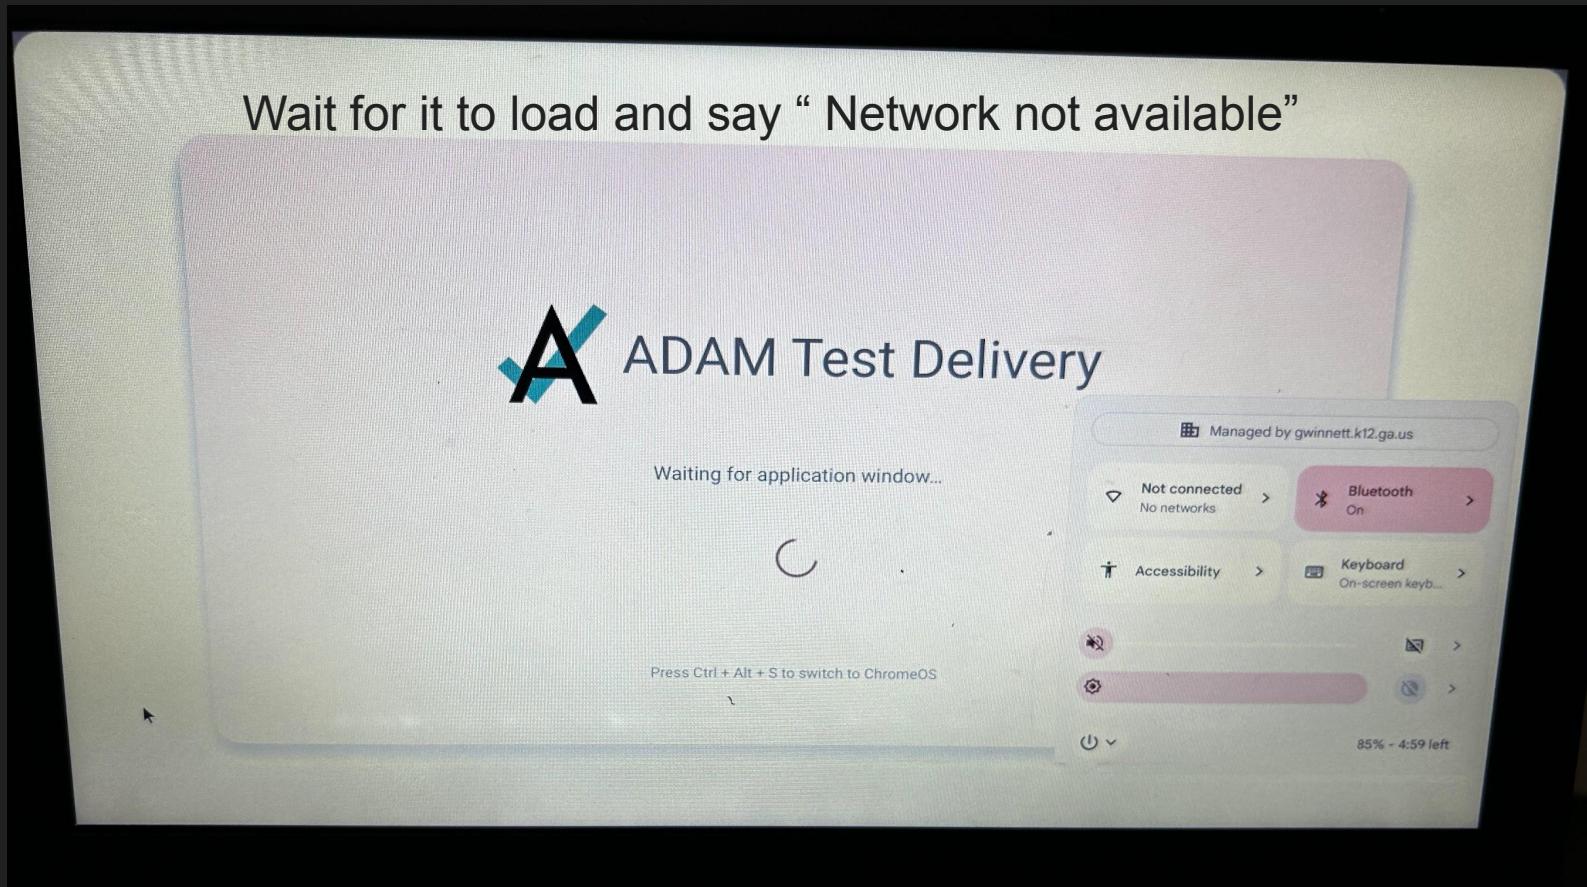

Click on Adam Test Delivery and at the same time Press Alt + Shift + S

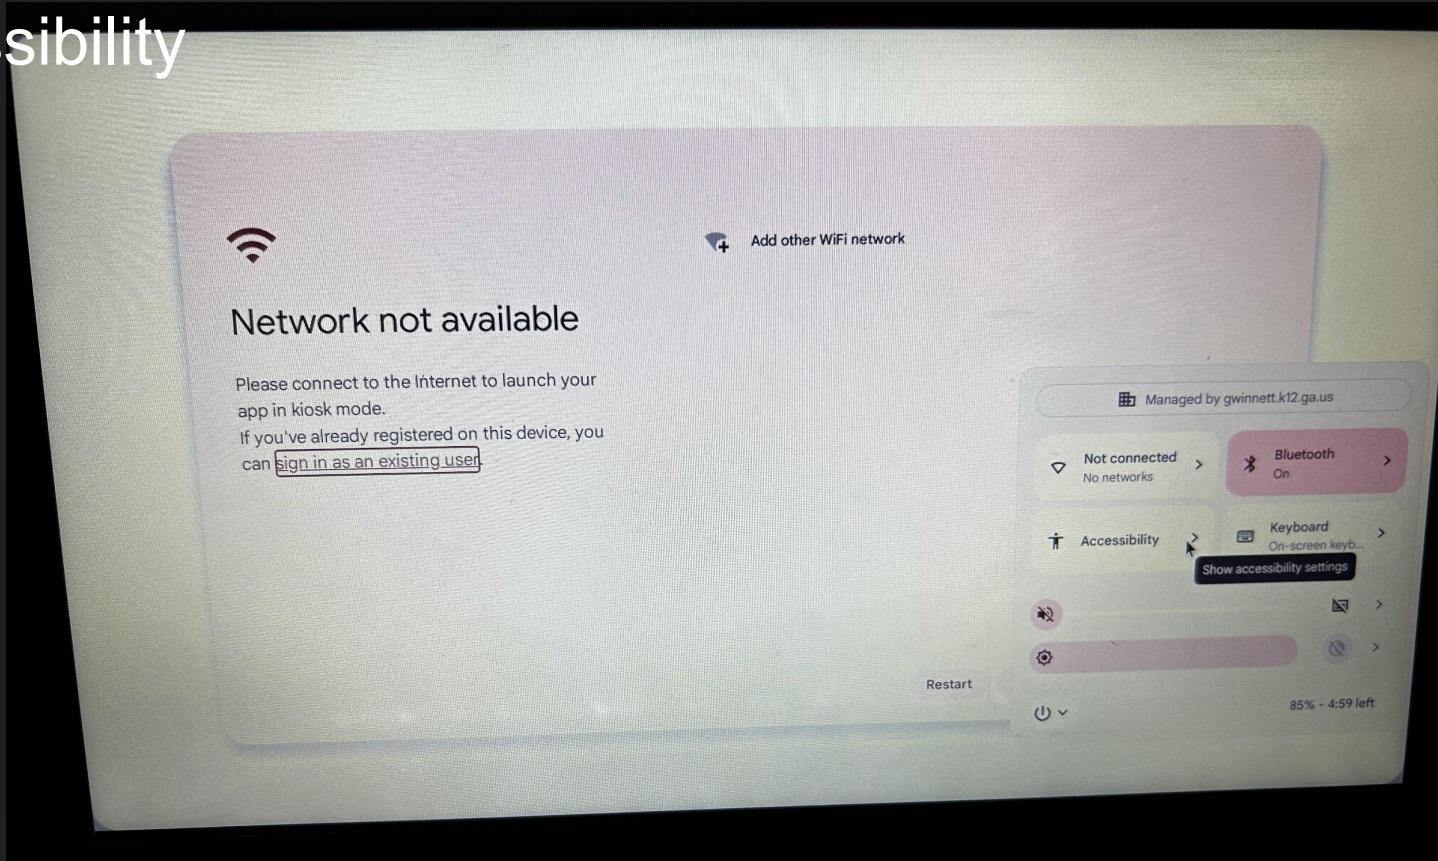

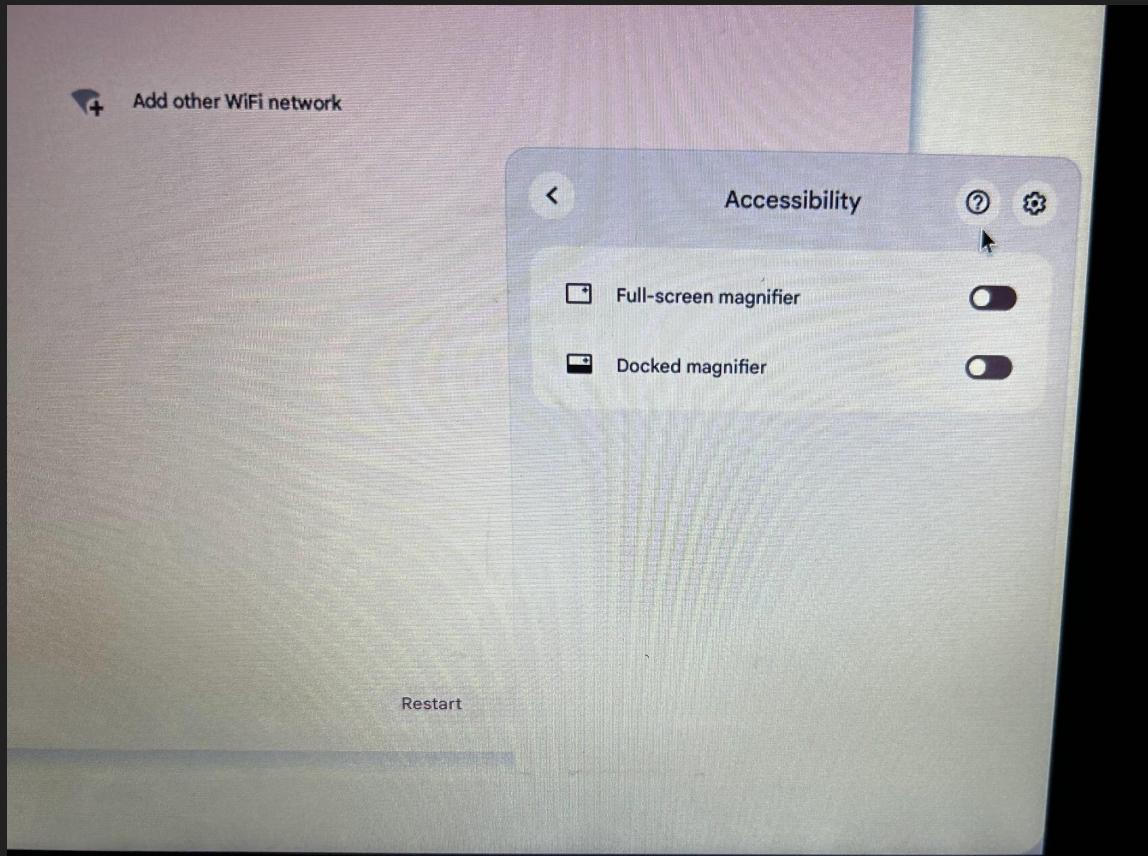

It should now look like this, If it doesn't restart the exploit.

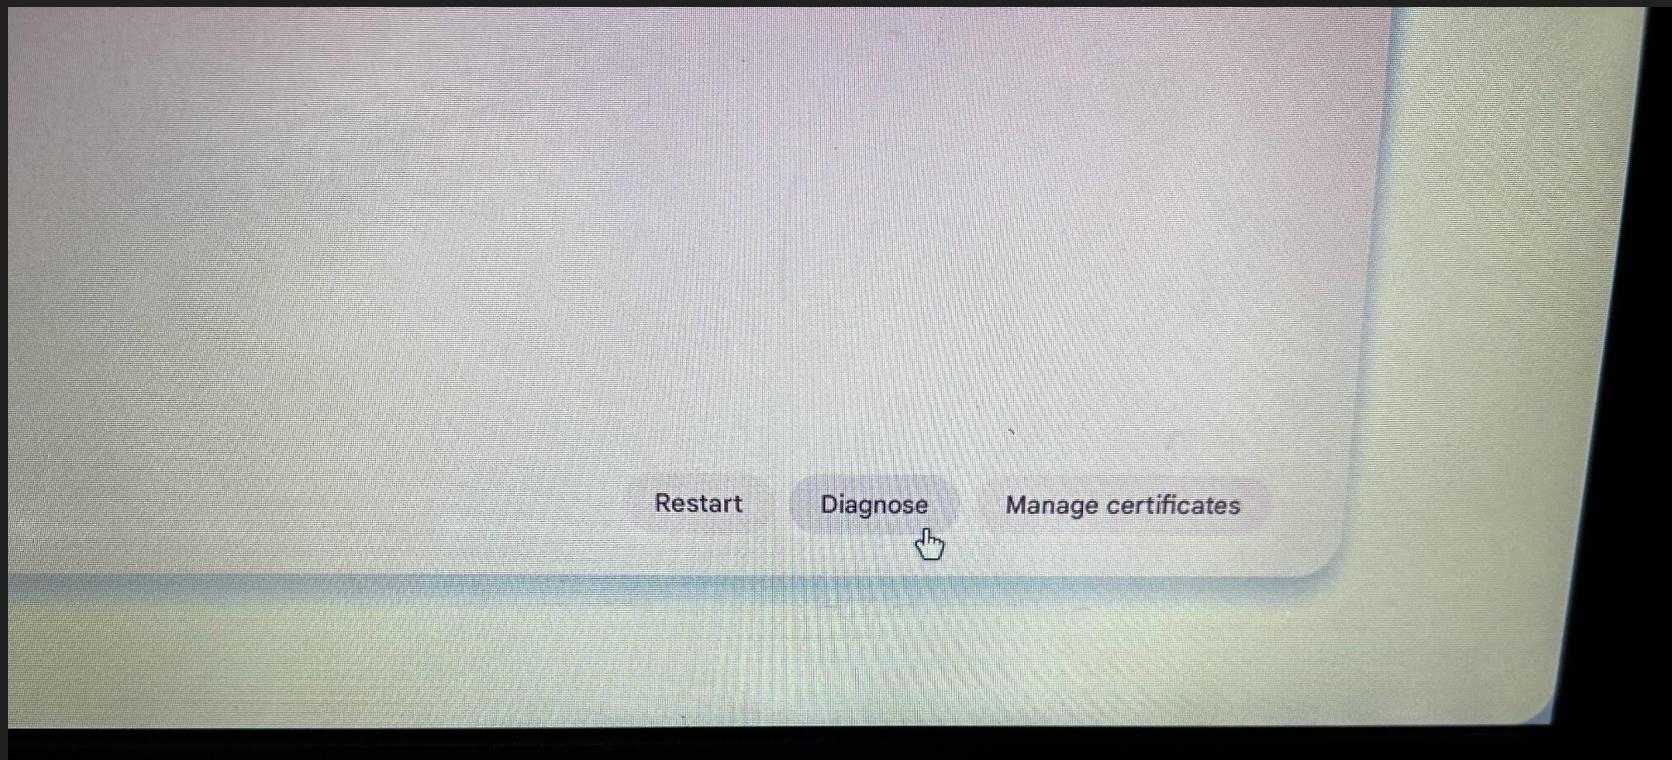

If you did it correctly it should look like this. Click on Accessibility

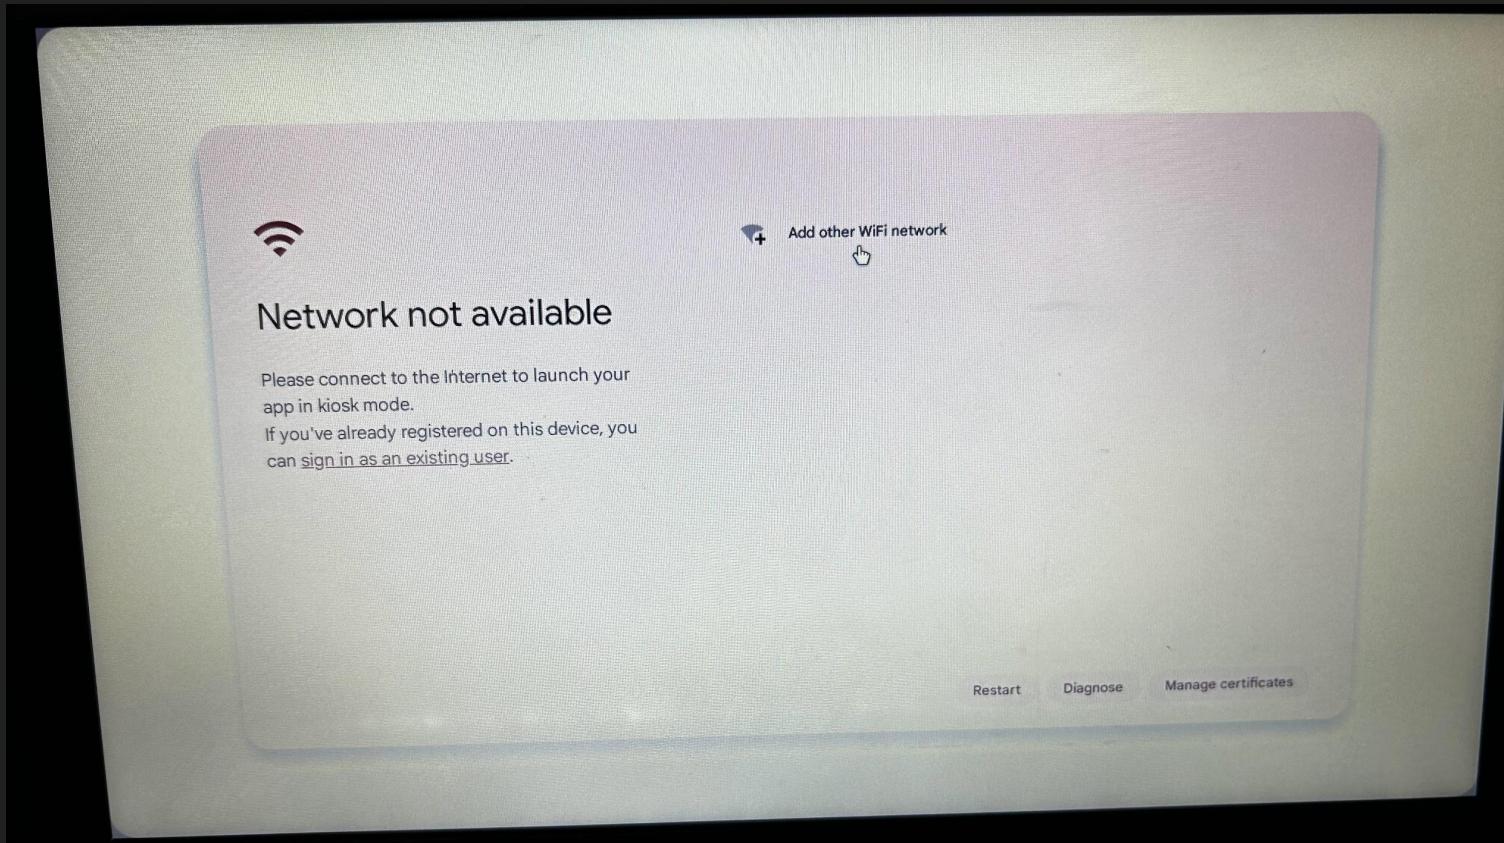

Click on the question mark.

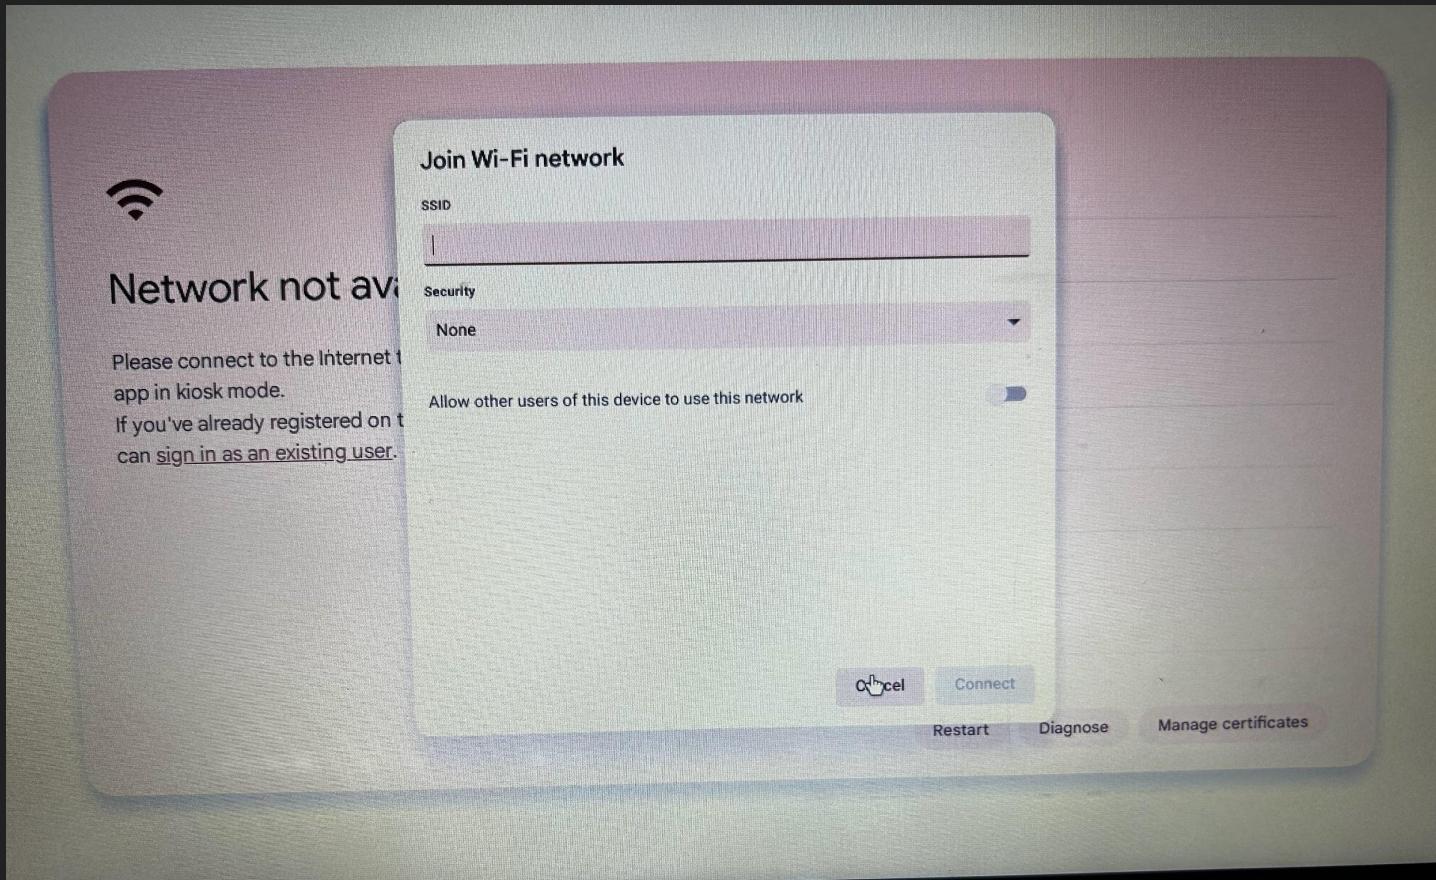

Then click “Diagnose”

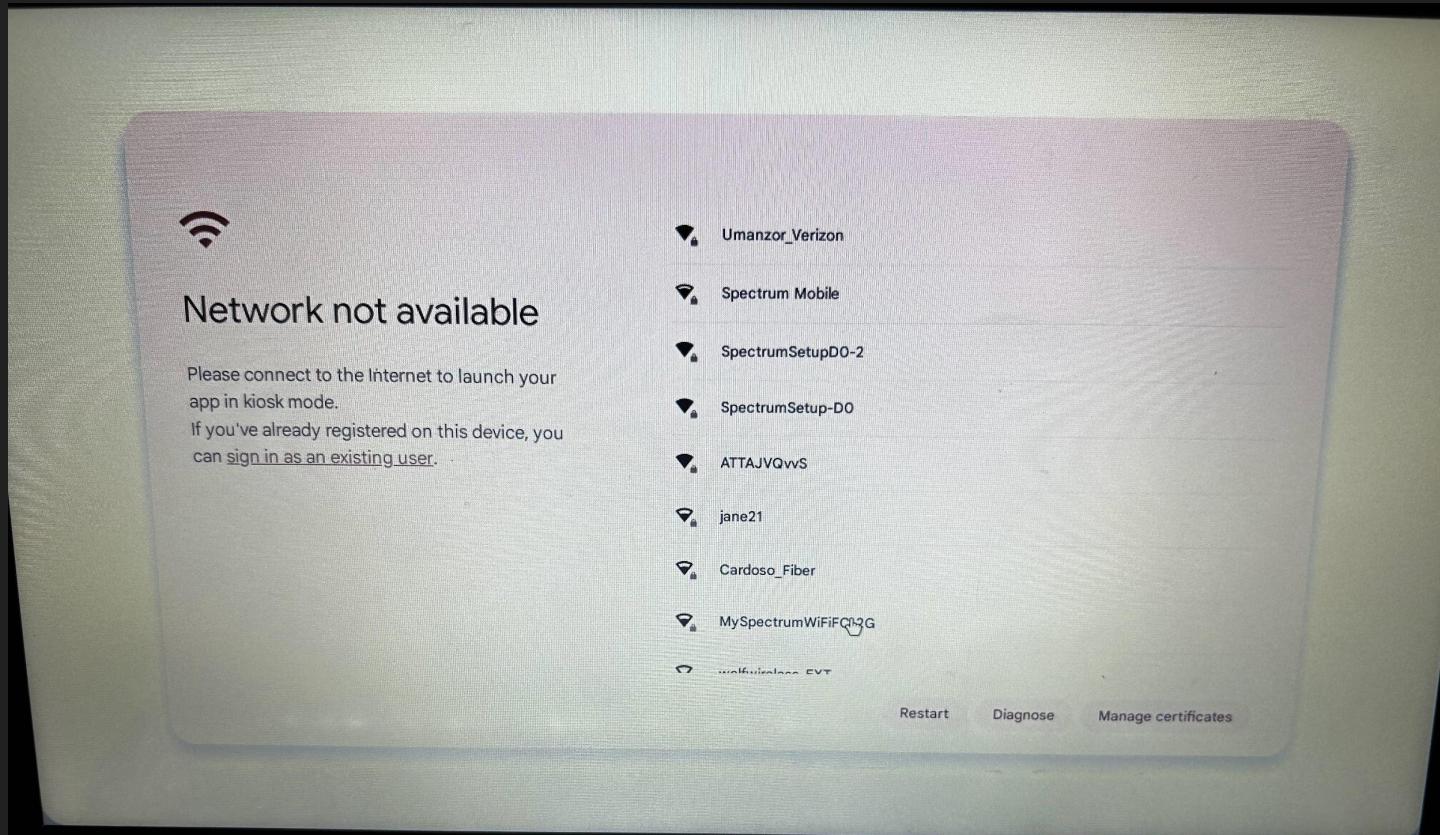

# Click “Add Other WiFi network”

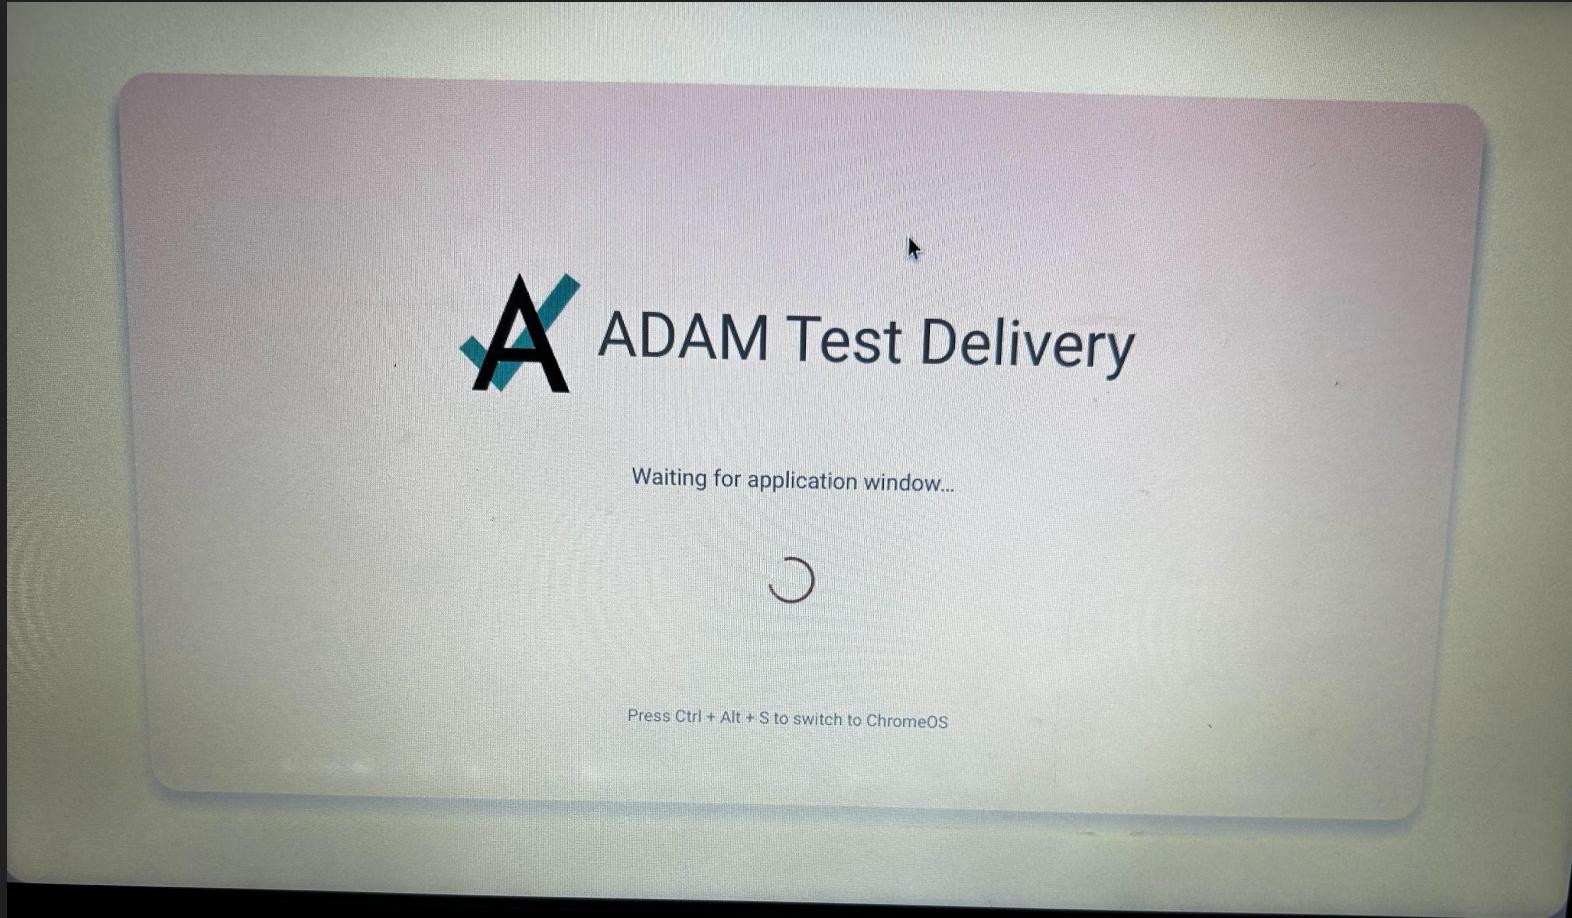

# This should appear, you can click cancel.

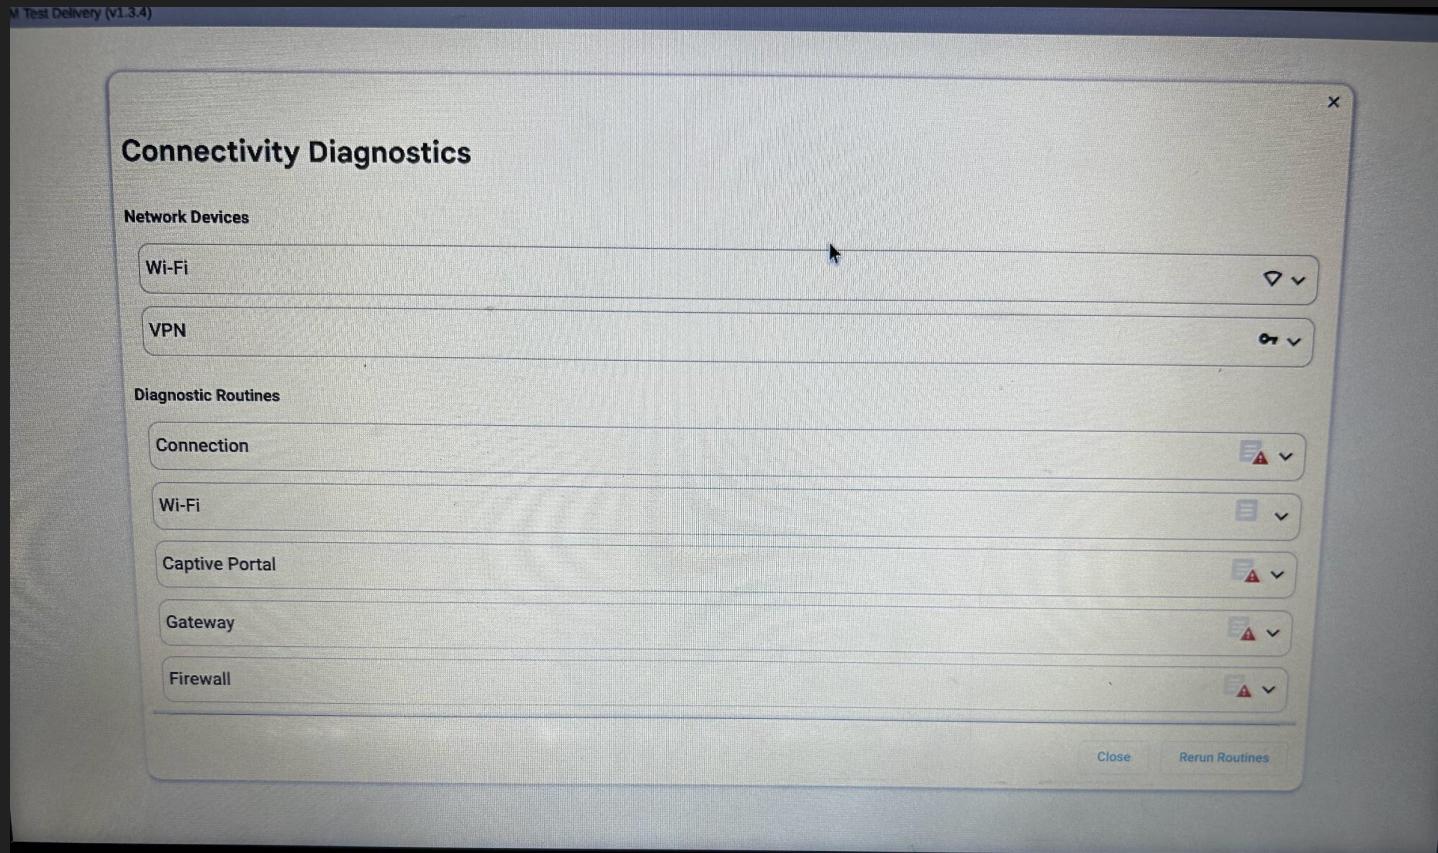

# Select your hotspot/wifi network and wait for the app to load

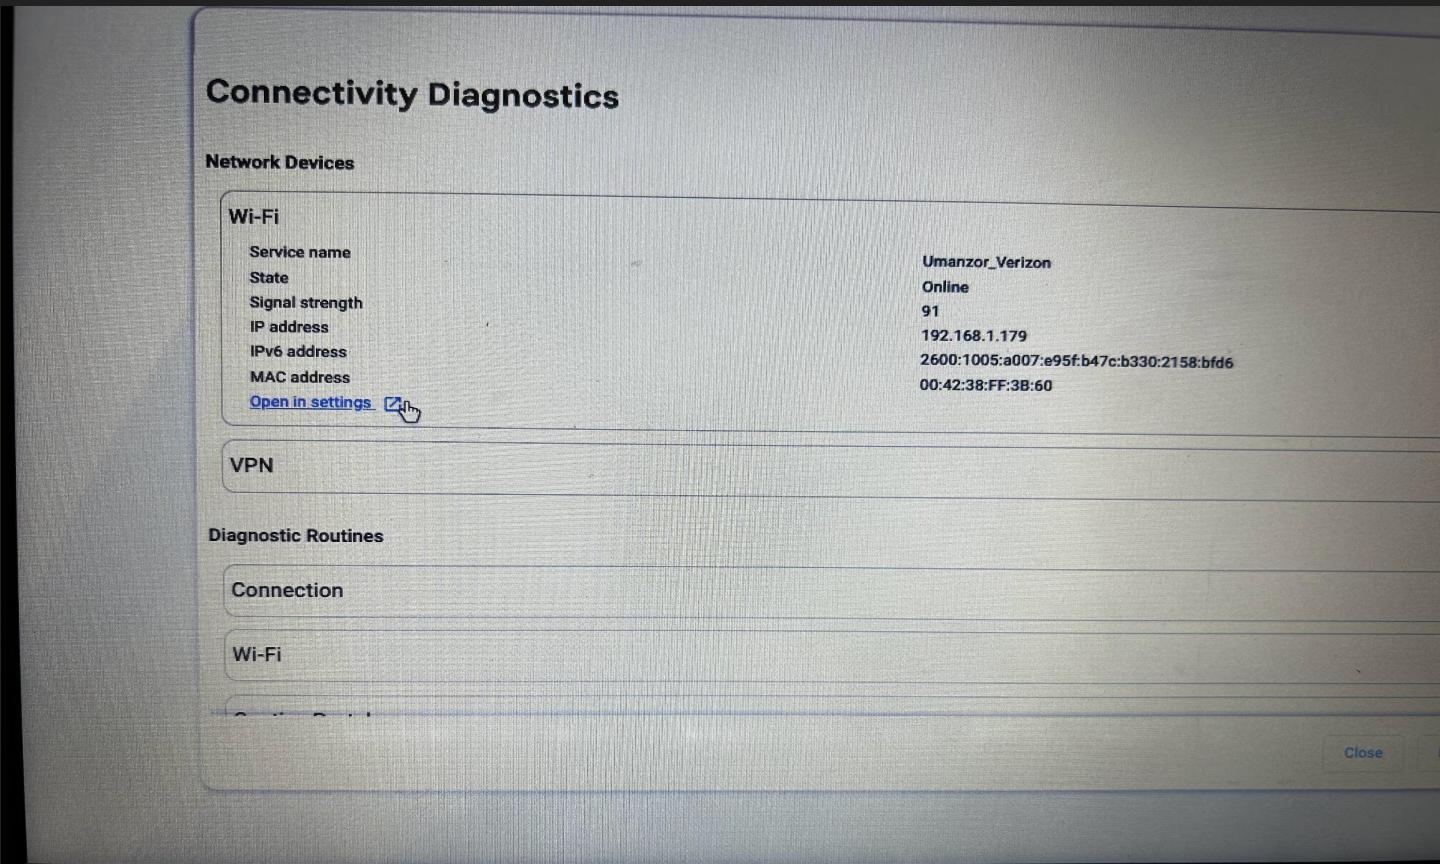

Wait for it to load....

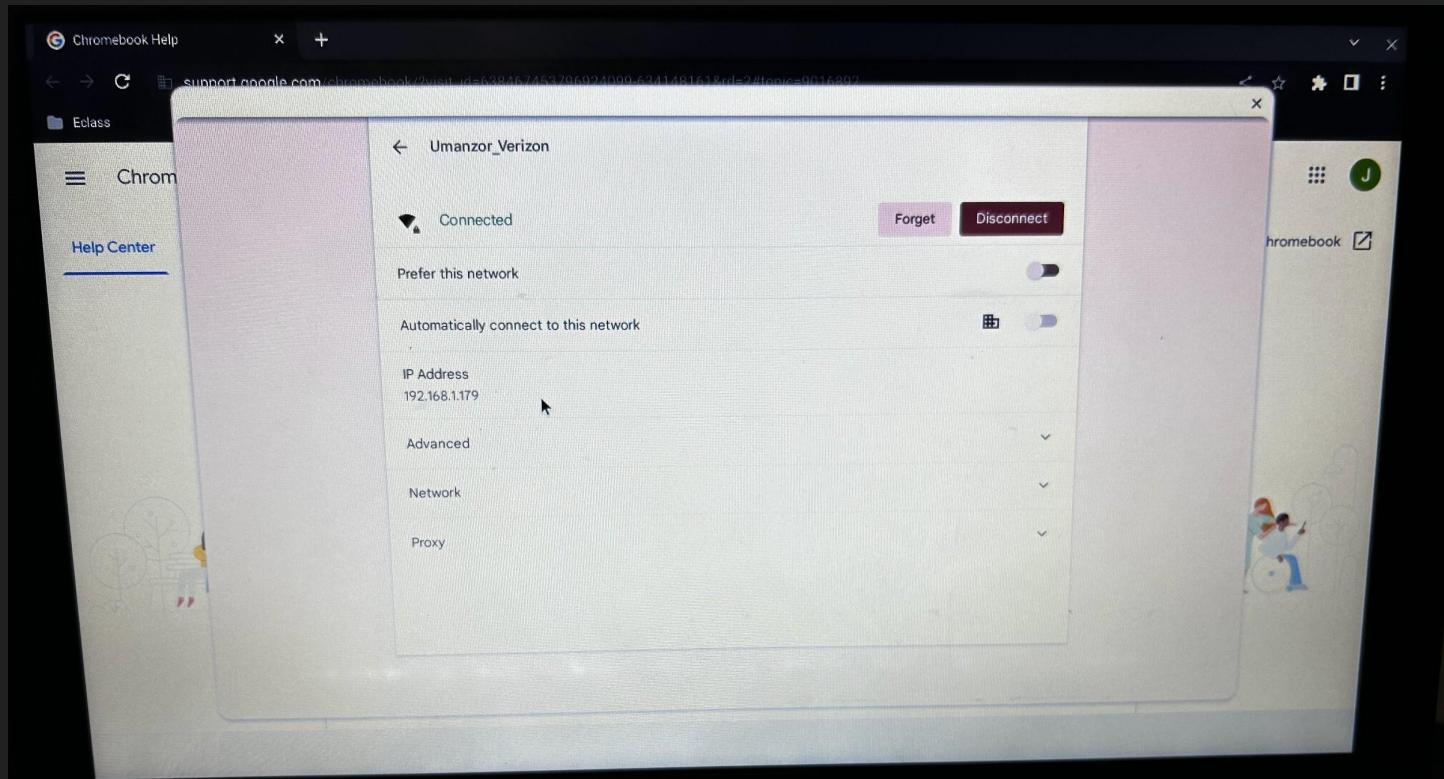

This window should appear, click on “Wifi”

# Click “Open In Settings”

You should now see that there is another chrome window behind the settings tab.

In the settings tab disconnect from your hotspot and click wifi, then goto known networks and then connect to “GCPS-Chrome”

Close out the settings window and congratulations you now have an unblocked chrome window!
